Xenon Kit

Nuova centralina più sottile e leggera.
Tempo di accensione ridotto a circa 2 secondi
 Non rilevabile dal 90% delle centraline computerizzate di auto-diagnosi evitando così, l'accensione della spia di lampada bruciata (permette il montaggio senza l'aggiunta di resistenze)

New super thin ballast,
2 seconds only warm-up time.
 Solves the problem of check-lamp for 90% of cars with computerized check-lamps system. (avoids the need to install a resistor to cheat the computer)

KIT CONVERSIONE LAMPADE XENON

Per montaggio su vetture con impianto alogeno tradizionale. Non necessita nessuna modifica al veicolo. Fascio luce ultra-bianco con oltre 2500 lumen, il doppio delle lampade alogene tradizionali ma con un assorbimento di corrente inferiore del 50%.

HID XENON KIT

High intensity discharge systems lamps. For fitting as replacement of conventional headlights. No modification is necessary. Ultra-bright white illumination with more than 2500 lumens, twice the light output of traditional halogen bulbs but half the power consumption

Bi-lampada - Twin-bulb

Xenon per anabbagliante, alogena per abbagliante Xenon for driving light, halogen for spotlight

Bi-Xenon

Xenon per anabbagliante e abbagliante Xenon for high and low beam

NOTA: L'omologazione prescrive che il veicolo sul quale vengono montate lampade allo Xenon deve essere equipaggiato con un impianto lavafari e con un correttore di assetto fari automatico. In mancanza di questi dispositivi l'omologazione non è valida.

NOTE: According to E-Mark regulations, in case of OEM or aftermarket HID XENON lights all vehicles must be equipped with headlights washing-system and with self-levelling headlights. E-MARK is not valid if such devices are missing.

CHEAT-BOX

Centralina supplementare per il montaggio dei kit Xenon. Evita la segnalazione di "lampada bruciata" e previene l'interruzione dell'alimentazione da parte della centralina. Adatta alla maggioranza delle nuove vetture in circolazione

CHEAT-BOX

Additional device for the installation of Xenon kits. Avoids the signalling of "bulb-failure" and prevents the "cut-off" of the power by the control unit.
